

COMPLIANCE CALENDAR & FILING ORCHESTRATION FOR INDIAN SMBs

Complete Startup Execution Blueprint

Product Architecture · SDLC · GTM · Scaling · AI Design

Classification	Confidential — Founder & Investor Use
Document Type	Execution Blueprint + Technical Architecture + SDLC Plan
Market	India-first SMB + Global SaaS Expansion
Stage	Pre-seed / Solo Founder
Date	May 2026
Total Sections	16 Sections — Full Operating Manual

TABLE OF CONTENTS

1. Executive Product Vision

2. User Personas & Customer Journey

- SMB Owner
- Ops Manager
- Finance/Admin
- Agency
- Enterprise

3. Product Requirements Document (PRD)

- MVP Features
- V2 & V3 Roadmap
- User Stories

4. Full System Architecture

- Frontend
- Backend
- Database
- AI Architecture
- Infrastructure
- Security

5. Database & Entity Design

- ER Model
- Table Structures
- Indexing

6. AI Agent Workflow Design

- Autonomous Workflows
- Multi-Agent Coordination
- Escalation Logic

7. UI/UX System Design

- Dashboard
- Onboarding
- Design System
- Key Screens

8. SDLC & Engineering Execution Plan

- 10 Phases
- Timelines
- KPIs

9. Agile & Project Management

- Sprint Plan
- Backlog
- Git Strategy

10. Monetization & Business Model

- Pricing Tiers
- MRR Projections
- Unit Economics

11. Go-To-Market Strategy

- Launch
- SEO
- Cold Outreach
- Viral Loops

12. Scaling Strategy

- Infra
- DB
- AI Cost
- Multi-tenant

13. Risk Analysis

- Technical
- Business
- AI
- Regulatory

14. Execution Priority Matrix

- Impact vs Complexity
- Dependency Graph

15. Complete Implementation Roadmap

- Day-by-Day
- Week-by-Week
- Month-by-Month

16. Emergent AI Development Strategy

- Where AI Code is Safe
- Manual Engineering Zones

SECTION 1 — EXECUTIVE PRODUCT VISION

1.1 Product Vision Statement

DeadlineOS is the AI-native compliance operating system for Indian SMBs — replacing the spreadsheet, the WhatsApp reminder, and the missed CA callback with a single intelligent platform that owns your compliance calendar, surfaces the right actions at the right time, and keeps every filing on track without human babysitting.

1.2 Mission

To make missed compliance deadlines technically impossible for any Indian SMB — regardless of their accounting knowledge, team size, or CA engagement quality.

1.3 Problem Statement

India has 63+ million MSMEs. Every single one faces a recurring, mandatory, penalized compliance calendar: GST filings, TDS deposits, advance tax, ROC filings, PF/ESIC returns, professional tax, and dozens of state-level obligations. The current stack is: Excel → WhatsApp reminders → CA calling 2 days before deadline. The consequence of failure is immediate and financial: late fees, interest, notices, and CA penalties. Yet no affordable, intelligent platform owns this workflow end-to-end.

1.4 Why NOW Is the Correct Timing

Signal	Evidence
GST 2.0 complexity spike	MoF tightening real-time reporting (GSTN API mandates expanding to more categories 2025–26)
India SMB digital adoption	Post-Covid cohort now uses SaaS — comfort with subscription tools has crossed the chasm
CA shortage vs SMB growth	More businesses, finite CAs — digital intermediation is the only scale path
LLM accessibility	GPT-4/Claude APIs allow extraction of compliance rules from PDFs, circulars, and notifications at \$0.01/query
Agentic workflow maturity	n8n, Temporal, and LangGraph are now stable enough for production compliance agents
YC compliance category heat	YC 2025–26 has funded 12+ compliance-adjacent startups, signalling validated market interest

1.5 Customer Psychology — Why They Pay Monthly

Compliance spend is not optional spend. It sits in the same mental bucket as rent and payroll. The moment a business owner trusts DeadlineOS as their single source of compliance truth, switching cost becomes enormous — the platform holds their full filing history, document vault, entity profiles, and advisor relationships. This is a **trust-lock product**, not a convenience product.

1.6 Competitive Advantage & Long-Term Moat

Moat Layer	Description
Workflow ownership	Not just reminders — owns the action queue, document checklist, and filing status in one place
CA network effect	Each CA firm that uses the advisor portal brings 20–200 SMB clients with them
Compliance knowledge graph	Over time, builds a proprietary graph of rules, entity types, jurisdictions, and exceptions that no competitor can replicate quickly
Filing history data	Historical filing data per entity becomes a powerful retention anchor and potential credit/fintech lever
Regulatory update speed	AI pipeline that ingests CBIC/MoF notifications and maps updates to affected entities faster than any human team
WhatsApp familiarity	Indian SMB owners trust WhatsApp — building native WA reminders creates a daily-active touchpoint no web app achieves

1.7 Platform Expansion Potential

Phase	Expansion	Revenue Logic
Phase	Expansion	Revenue Logic
Core	Compliance Calendar + Reminders	SaaS subscription
Phase 2	Document vault + filing readiness	Higher tier upsell
Phase 3	CA collaboration portal	Per-CA seat pricing
Phase 4	Compliance API for fintechs & accounting software	API usage fees
Phase 5	Working capital / invoice discounting (compliance data → credit signal)	Revenue share / referral
Phase 6	Global: VAT, sales tax, corporate tax for emerging markets	Geographic expansion

SECTION 2 — USER PERSONAS & CUSTOMER JOURNEY

PERSONA 1 — The SMB Owner (Primary Buyer)

Demographics	Age 32–52 2nd-generation or first-gen entrepreneur Tier 1/2 Indian city Revenue ₹50L–10Cr 2–25 employees
Pain Points	Doesn't know which filing is due this week Relies entirely on CA Received a GST notice once and panicked Doesn't know what documents to keep ready
Frustrations	CA doesn't always proactively call Excel doesn't remind Penalty only discovered after filing Multiple entities means chaos multiplies
Existing Solutions	Personal calendar reminders WhatsApp CA group Tally (accounting, not compliance calendar) Basic reminder apps
Buying Trigger	A late filing penalty OR seeing a peer use the product CA recommends it Google search after a notice
Churn Trigger	Feels CA is handling it Product sends too many notifications Onboarding too complex
Willingness to Pay	₹1,500–3,000/month for peace of mind across 1–3 entities
Emotional Motivator	"I never want to be embarrassed by a compliance notice in front of my bank or investor"

PERSONA 2 — The CA / Bookkeeper (Power User & Distribution Channel)

Demographics	Chartered Accountant Age 28–45 Manages 50–500 SMB clients Bangalore/Mumbai/Delhi or Tier 2
Pain Points	Manually tracks 300+ client deadlines in Excel Misses a client deadline, client blames CA No single dashboard across all clients Spends 4+ hours/week just on reminder WhatsApps
Buying Trigger	One missed deadline causing a client dispute Peer CA using modern tooling Accountant community recommendation
Willingness to Pay	₹500–2,000/month for the advisor portal (or clients pay, CA gets free)
Retention Driver	Once client portfolio is loaded, migration cost is enormous Time savings are immediate and measurable
Distribution Value	Each CA brings 20–200 clients — most powerful acquisition channel in the product

PERSONA 3 — The Operations Manager (Internal Champion)

Demographics	Age 26–40 Startup or growing SMB Reports to founder Owns compliance coordination
Pain Points	Has to chase CA, chase documents, chase approvals — all manually No audit trail when something goes wrong
Buying Trigger	Founder asks "why did we miss that filing?" Operations review reveals compliance risk

Willingness to Pay	Decision is made by founder — champion needs ROI narrative to present upward
Retention Driver	Audit trail and status visibility make them look professional in internal reviews

PERSONA 4 — The Agency / Multi-Entity Operator

Demographics	Manages 3–20 entities Holding company structure or franchise Needs portfolio view
Pain Points	Different deadlines per entity Some entities in different states (different PT, shops act)
Willingness to Pay	■5,000–15,000/month for portfolio view across 10+ entities — highest LTV persona
Retention Driver	Historical filing data makes them never want to leave

2.5 Full Customer Journey Map

Stage	Touchpoint	Goal	KPI
Awareness	Google search "GST deadline missed fine India" CA recommendation LinkedIn ad Reddit/IndieHackers	Know product exists	Organic visits, CAC
Acquisition	Landing page → free trial CTA Product Hunt CA referral code	Sign up for trial	Trial starts, CAC
Onboarding	Entity setup wizard → jurisdiction → obligation mapping → first deadline visible	See first value in <10 min	Time-to-first-value, setup completion %
Activation	First reminder received and marked complete First CA connected	Habit formed — product owns their calendar	30-day retention, reminder CTR
Retention	Weekly digest emails WhatsApp reminders Proactive "3 deadlines next week" alerts	Monthly re-engagement Filing history growing	MoM retention, DAU/MAU
Expansion	2nd entity added CA portal unlocked Document vault used	Revenue per account grows	Expansion MRR
Referral	Refer-a-CA program Share compliance report with investor/banker	Organic acquisition	Referral rate, viral coefficient

SECTION 3 — PRODUCT REQUIREMENTS DOCUMENT (PRD)

3.1 MVP Feature Set (Must Have)

#	Feature	User Story	Acceptance Criteria
1	Entity Setup Wizard	As an SMB owner, I want to set up my business profile so the system knows my obligations	Entity created with jurisdiction, business type, GSTIN stored; obligations auto-mapped
2	Compliance Deadline Engine	As a user, I want to see all my filing deadlines in one calendar view	Calendar shows all obligations for current quarter; deadlines color-coded by urgency
3	AI Obligation Mapping	As a user, I want the system to automatically know which filings apply to me	Based on entity type + state + revenue tier, correct obligations are assigned without manual input
4	WhatsApp + Email Reminders	As a user, I want to be reminded 7, 3, and 1 day before each deadline	Reminders sent via WhatsApp (Twilio/WABA) and email at configured intervals
5	Document Checklist	As a user, I want to know exactly what documents I need to prepare for each filing	Per-obligation checklist generated; items checkable; upload slot per document
6	Status Tracking	As a user, I want to mark a filing as done and see my compliance history	Filings can be marked: Upcoming / In Progress / Filed / Overdue; history logged
7	CA/Advisor Portal	As a CA, I want to see all my clients' upcoming deadlines in one view	CA can view portfolio-level deadline dashboard; send nudges to clients
8	Multi-Entity Dashboard	As an agency owner, I want to see all my entities at a glance	Portfolio view with per-entity compliance score, next deadline, overdue count
9	Subscription Billing +	As a user, I want to subscribe and manage my plan	Stripe/Razorpay integration; plan upgrade/downgrade; invoice generation
10	Audit Log	As an operations manager, I want a history of all actions taken	Every filing status change, document upload, and reminder sent is logged with timestamp + user

3.2 V2 Feature Set (Should Have — Month 4–8)

Feature	Description	Priority
AI-generated filing summaries	Gemini/Claude generates a plain-English summary of what each filing means and what data to gather	High
Automated regulatory update ingestion	Agent scrapes CBIC, MoF, GSTN notifications and maps changes to affected entities	High
Filing readiness score	Per-entity score (0–100) showing how ready the business is for upcoming deadlines	High
Document vault with AI tagging	Upload invoices, ledgers, returns — AI auto-tags and links to correct obligation	Medium
Bulk import from Tally/Zoho Books	CSV or API import of existing entity data to reduce manual setup friction	Medium

Analytics dashboard	Compliance trends, on-time rate, penalty history, CA performance metrics	Medium
White-label for CA firms	CA firms can brand the portal for their client base	Medium
Mobile app (PWA)	Progressive web app for owner-level quick-checks on mobile	Low

3.3 V3 Vision (Month 9–18)

Feature	Strategic Value
Compliance API for fintechs	License real-time compliance status data to banks and NBFCs for credit decisioning
Predictive penalty risk engine	ML model trained on entity profiles + delay patterns to predict which clients are at risk
Multi-jurisdiction expansion (UAE, Singapore)	UAE VAT, Singapore GST share structural similarity — same engine, new rule sets
AI filing agent (full automation)	With accountant approval, auto-prepare draft return data from connected accounting systems
Executive compliance dashboard for investors	One-click compliance health report for portfolio companies — target VC/PE firms

3.4 Permission System & Role Hierarchy

Role	Access Scope	Key Permissions
Role	Access Scope	Key Permissions
Super Admin	Full system	All — platform management, billing, user creation
Workspace Owner	Own workspace + entities	Create entities, invite members, manage subscription, view all data
Finance Manager	Assigned entities only	Upload documents, mark filings, view deadlines, receive reminders
CA/Advisor	Client portfolios	View client dashboards, send nudges, add notes, cannot edit client data
Read-Only	Assigned entities	View deadlines and compliance status only — no edit, no upload

SECTION 4 — FULL SYSTEM ARCHITECTURE

4.1 Architecture Overview

DeadlineOS is built as a **modular monolith** initially, with clear service boundaries designed for future microservice extraction. This avoids premature complexity while ensuring the codebase can scale without a rewrite. The stack is chosen for Indian-market deployment (low-latency on AWS Mumbai), WhatsApp-native UX, and AI-first workflows.

4.2 Frontend Architecture

Decision	Rationale
Decision	Rationale
Next.js 14 (App Router)	SSR for SEO on public pages, client components for dashboard interactivity, built-in API routes
TypeScript	Type safety for a compliance product where data integrity is critical
Zustand (state management)	Lightweight, no boilerplate — sufficient for a focused SaaS dashboard
shadcn/ui + Tailwind CSS	Fast, accessible component library with full customisation for enterprise white-label
React Query (TanStack)	Server state management with caching, background refresh for dashboard data
Clerk (Auth)	Pre-built auth with Indian phone OTP, Google SSO, and team/organisation support
Recharts	Compliance analytics dashboard visualisations — lightweight, composable

4.3 Backend Architecture

Component	Design
Component	Design
Framework	FastAPI (Python) — async-first, OpenAPI auto-docs, strong AI library ecosystem
Architecture Pattern	Modular monolith with domain modules: entities, compliance, notifications, billing, ai_agents, admin
API Design	REST for standard CRUD; WebSockets for real-time dashboard updates (deadline status changes)
Job Queue	Celery + Redis — handles scheduled reminder sends, regulatory update polling, AI batch processing
Background Jobs	APScheduler for cron-style deadline engine (nightly scan of upcoming deadlines)
Event System	Internal event bus (using Celery signals) — deadline_approaching → trigger_notification_workflow
Service Layer	Each domain has: Router → Service → Repository → Model. No direct DB calls in routers.
Error Handling	Structured error responses, Sentry integration, dead-letter queues for failed notification jobs

4.4 AI Architecture

The AI layer has three distinct functions, each with different latency and cost profiles:

AI Function	Approach	Model / Tool
AI Function	Approach	Model / Tool
Obligation mapping (entity setup)	LLM classifies entity type + state + revenue tier → maps to obligation ruleset from knowledge base	Claude Haiku / GPT-4o-mini (fast, cheap)
Regulatory update ingestion	Agent scrapes CBIC/GSTN RSS, PDF notifications → extracts rule changes → maps to affected entity types → creates amendment records	GPT-4o + pgvector RAG over compliance KB
Plain-language filing summaries	Per-obligation: generate a 3-sentence explanation of what this filing means, what data is needed, and what the penalty is for missing it	Claude Haiku (batch, low cost)
WhatsApp message generation	Personalised reminder messages with entity name, deadline, and CTA link — tone-aware (formal for corporate, casual for small biz)	Prompt template + Haiku completion
Filing readiness scoring	Checklist completion + document upload status + historical on-time rate → AI-weighted score	Rule-based + lightweight ML score
CA insight summaries	Weekly digest for CA: "3 clients have outstanding items, 2 are at risk this week"	Claude Sonnet (weekly batch)

4.5 RAG Architecture for Compliance Knowledge Base

4.6 Infrastructure & Cloud Strategy

Component	Choice	Rationale
Component	Choice	Rationale
Cloud Provider	AWS (Mumbai region ap-south-1)	Lowest latency for India, strong SaaS startup credits, familiar ecosystem
Compute	AWS ECS Fargate (containers, no K8s initially)	Managed containers without K8s overhead — K8s at 500+ tenants
Database	Supabase (managed Postgres on AWS)	Postgres + pgvector + real-time + storage in one — saves ops time for solo founder
Cache / Queue	Upstash Redis (serverless)	No Redis server to manage — scales to zero, billed per request
CDN	CloudFront	Static asset caching, Edge for global expansion
Storage	S3	Document vault storage with pre-signed URLs
Email	AWS SES	■0.09 per 1000 emails — cheapest for India volume
WhatsApp	Twilio WABA or Gupshup	Gupshup is cheaper for India — ■0.05–0.15 per conversation
Monitoring	Grafana Cloud (free tier) + Sentry	Full-stack observability without cost overhead
CI/CD	GitHub Actions → ECR → ECS	Push-to-deploy pipeline, zero additional tooling cost

4.7 Security Architecture

Layer	Implementation
Layer	Implementation
Authentication	Clerk — JWTs, session management, OTP for Indian users, Google SSO
Authorization	Row-Level Security (RLS) in Supabase Postgres — tenant isolation at DB layer
Encryption at rest	Supabase AES-256 encryption for all stored data
Encryption in transit	TLS 1.3 enforced across all endpoints

API Security	Rate limiting per IP and per API key (Kong gateway), OWASP API Security Top 10 checklist
Secrets	AWS Secrets Manager — no secrets in environment variables or code
Compliance data sensitivity	GST numbers, TAN, PAN treated as PII — encrypted fields, access logged
Audit logging	Every data access and mutation logged to append-only audit_logs table — immutable via Postgres trigger
DDoS	AWS Shield Standard (free) + CloudFront WAF rules

SECTION 5 — DATABASE & ENTITY DESIGN

5.1 Core Entity Relationship Summary

All data is scoped under a **workspace** (one per business group). A workspace has many **entities** (legal companies). Each entity has many **obligations** (types of compliance). Each obligation generates recurring **deadlines**. Each deadline has a **filing_record** and associated **documents**. Notifications are triggered by deadline proximity.

workspaces

id, name, owner_user_id, plan_tier, created_at, billing_status

users

id, email, phone, full_name, role, workspace_id, clerk_user_id, created_at

entities

id, workspace_id, name, gstin, tan, pan, business_type, state_code, registration_date, is_active

jurisdictions

id, state_code, state_name, pt_applicable, shops_act_applicable, professional_tax_slabs

obligation_types

id, name, category, frequency, governing_body, typical_due_date_rule, applicable_entity_types[]

entity_obligations

id, entity_id, obligation_type_id, is_active, custom_due_offset, created_at

deadlines

id, entity_obligation_id, due_date, period_start, period_end, status(upcoming/inprogress/filed/overdue), filing_record_id

filing_records

id, deadline_id, filed_at, filed_by_user_id, ack_number, notes, filing_readiness_score

documents

id, entity_id, deadline_id, filename, s3_key, document_type, uploaded_by, uploaded_at, ai_tags

notifications

id, user_id, deadline_id, channel(email/whatsapp/inapp), sent_at, status, message_content

advisor_relationships

id, advisor_user_id, client_workspace_id, access_level, invited_at, accepted_at

compliance_knowledge

id, content, embedding(vector), source_url, obligation_type_id, effective_date, jurisdiction_id

ai_agent_logs

id, agent_type, input_summary, output_summary, tokens_used, cost_usd, entity_id, created_at

audit_logs

id, user_id, action, table_name, record_id, old_value(jsonb), new_value(jsonb), ip_address, created_at

subscriptions

id, workspace_id, stripe_sub_id, razorpay_sub_id, plan, status, current_period_end, entity_limit, seats

5.2 Indexing Strategy

Index		Rationale
Index		Rationale
deadlines(due_date, status)		Nightly cron: "find all upcoming deadlines in next 7 days across all entities" — critical query
deadlines(entity_obligation_id)		Per-entity deadline list for dashboard loading
notifications(user_id, sent_at)		Avoid duplicate reminder sends — check if reminder already sent today
compliance_knowledge(embedding) ivfflat/hnsw	—	Vector similarity search for RAG — must be indexed or queries are O(n)
audit_logs(table_name, record_id)		Audit trail lookup by entity/deadline — support queries
entities(workspace_id, is_active)		Dashboard: "show all active entities for this workspace"

SECTION 6 — AI AGENT WORKFLOW DESIGN

6.1 Agent Inventory

Agent Name	Trigger	Output
Agent Name	Trigger	Output
ObligationMapper	New entity created	List of applicable obligation types mapped to entity
RegulatoryWatcher	Daily cron + CBIC RSS	Amendment records; affected entity flagging
SummaryGenerator	Deadline created / obligation added	Plain-language filing explanation + checklist items
ReminderComposer	7/3/1 day before deadline	Personalised WhatsApp + email message per user preference
ReadinessScorer	Document upload / checklist change	Updated filing_readiness_score on deadline record
CAWeeklyDigest	Every Monday 8am	Per-CA: upcoming client deadlines + at-risk summary
PenaltyRiskPredictor	Nightly (entity overdue history)	Risk score per entity-obligation pair for next quarter

6.2 ObligationMapper Agent — Detailed Workflow

```
TRIGGER: POST /entities (new entity created)
↓
INPUT: { entity_type, state_code, gstin, revenue_tier, registration_date }
↓
STEP 1: Rule-based pre-filter
  → Load obligation_types where applicable_entity_types contains entity_type
  → Filter by state_code for state-specific obligations (PT, Shops Act)
  ↓
STEP 2: RAG lookup
  → Query compliance_knowledge: "What filings apply to a [entity_type] company
    in [state] with revenue [tier] registered since [date]?"
  → Top-5 relevant chunks retrieved
  ↓
STEP 3: LLM classification (Claude Haiku — ~$0.001 per entity)
  → Prompt: "Given these rules, confirm the obligations for this entity.
    Return JSON: [{obligation_type_id, frequency, effective_from, notes}]"
  ↓
STEP 4: Confidence check
  → If any obligation has confidence < 0.7 → flag for human review
  → Else → auto-create entity_obligations records
  ↓
STEP 5: Deadline generation
  → For each confirmed obligation → generate next 12 months of deadline records
  → Send welcome notification: "Your compliance calendar is ready"
  ↓
STEP 6: Log to ai_agent_logs
```

6.3 RegulatoryWatcher Agent — Detailed Workflow

```
TRIGGER: Daily cron 2:00 AM IST
↓
STEP 1: Fetch RSS feeds
  → CBIC: https://cbic.gov.in/htdocs-cbec/gst/rss.xml
  → GSTN notifications API
  → MCA notifications (ROC filings)
```

```

→ Filter: only entries newer than last_checked timestamp
↓
STEP 2: Document parsing
→ Download PDF attachments → extract text (pdfplumber)
→ If scanned PDF → OCR via Tesseract
↓
STEP 3: Change classification (GPT-4o)
→ Prompt: "Does this notification change any filing deadline, rate, or procedure?
If yes: what obligation_type, which jurisdictions, what changed, effective when?
Return JSON. If no relevant change: return null."
↓
STEP 4: Impact assessment
→ Map changed obligation_type + jurisdiction → affected entity_obligation records
→ Query: SELECT entity_id FROM entity_obligations WHERE obligation_type_id = ?
↓
STEP 5: Amendment creation
→ Create amendment record in compliance_knowledge
→ Re-chunk and re-embed updated rules
→ If deadline dates change → update affected deadline records
↓
STEP 6: Notify affected entities
→ Push in-app notification: "Rule update: GSTR-3B due date changed for Q1 FY27"
↓
STEP 7: Log + human review flag if change_magnitude = 'major'

```

6.4 Human-in-the-Loop Design

Scenario	HITL Mechanism
Scenario	HITL Mechanism
New obligation has confidence < 0.7	Flagged in admin dashboard for founder/CA review before activating
Regulatory change classified as "major"	Email to admin + hold on auto-applying deadline changes until confirmed
Entity has conflicting state vs central obligations	Auto-suggest but require workspace owner confirmation
AI summary contains uncertainty language ("may apply", "consult CA")	Display confidence warning in UI; suggest CA review
First time a new obligation_type is mapped to any entity	Requires founder review — not fully automated until 10+ precedents confirmed

SECTION 7 — UI/UX SYSTEM DESIGN

7.1 Design Principles

Principle	Application
Principle	Application
Clarity over cleverness	Compliance is stressful — UI must feel calm, ordered, and unambiguous. No dark patterns.
Action-first layout	Every screen answers: "What do I need to do right now?" Status and action are always visible.
Progressive disclosure	Show due-soon items first. Detail on demand. No overwhelming data dumps on load.
Trust signals	Audit trail visible, last-updated timestamps shown, AI confidence indicators — users must trust the data.
Mobile-first for owner views	SMB owners check on mobile. Dashboard widgets must work at 375px. CA portal can be desktop-first.
Bilingual readiness	All user-facing strings stored in i18n JSON — English + Hindi in V2 without architecture changes.

7.2 Navigation Structure

PRIMARY NAVIGATION (left sidebar):

- Calendar → Full compliance calendar, month/quarter/year view
- Entities → Entity list + per-entity dashboard
- Filings → All deadlines table with filters (status, entity, date range)
- Documents → Document vault with AI-tagged categorisation
- Notifications → Notification history + preference settings
- Team → User management, roles, CA advisor connections
- Analytics → Compliance score trends, on-time rate, penalty history
- Settings → Workspace, billing, integrations, notification templates

HEADER BAR:

- Global search (entities, deadlines, documents)
- Quick-add (+ New Filing / + New Entity)
- Notification bell (unread count)
- User avatar + workspace switcher

7.3 Key Screens

Screen	Key Components	Primary Action
Home Dashboard	Today's due items (red/amber), next 7-day strip, compliance score widget, "at-risk" entity banner if any	Open filing / Mark complete
Entity Profile	Entity details, active obligations list, compliance history, document vault, linked CA	Add document / Edit obligation
Calendar View	Month calendar with color-coded deadlines (green=filied, amber=upcoming, red=overdue), filter by entity	Click deadline → filing detail modal

Filing Detail	Obligation info, AI-generated summary, document checklist, status timeline, notes field, history log	Upload document / Mark filed
CA Portal (advisor view)	Client portfolio table, upcoming deadlines across all clients, at-risk filter, nudge button	Send nudge to client
Onboarding Wizard	Step 1: entity basics → Step 2: jurisdiction → Step 3: obligation confirmation → Step 4: first reminder preview	Complete setup → see calendar
Analytics Dashboard	Compliance score trend (line chart), on-time rate by obligation type (bar), penalty history (table)	Export report
Settings → Notifications	Per-channel toggle (email/WhatsApp/in-app), days-before preference, quiet hours, language preference	Save preferences

7.4 Design System

Token	Value
Token	Value
Primary color	#2563A8 (trust blue — conveys professionalism and compliance)
Danger / overdue	#DC2626 (red — immediate attention)
Warning / upcoming	#D97706 (amber — action needed soon)
Success / filed	#059669 (green — calm confirmation)
Typography	Inter (system-ui fallback) — clean, highly legible at small sizes
Base font size	14px body, 12px table data, 20px card headers
Border radius	6px cards, 4px buttons — professional, not playful
Shadow system	Subtle box-shadow only for interactive cards — no heavy drop shadows
Icon set	Lucide Icons — consistent, MIT licensed, React-native

SECTION 8 — SDLC & ENGINEERING EXECUTION PLAN

Phase	Duration	Deliverables	Key Activities	KPIs
1. Discovery	Week 1–2	Market validation report, 10 CA interviews, competitor analysis, pricing hypothesis	Interview 10 CAs + 10 SMB owners, map current compliance workflow, identify top 3 unmet needs, validate willingness to pay	10 interviews completed, pricing validated, 3 pilot commitments secured
2. Planning	Week 3	PRD v1, technical architecture doc, data model v1, 3-month sprint plan	Finalise feature list, design DB schema, choose tech stack, set up project management (Linear), define Definition of Done	PRD approved, architecture signed off, dev environment running
3. Design	Week 4–5	Figma wireframes for all MVP screens, design system tokens, onboarding flow	Design all 8 key screens, create component library in Figma, validate with 3 pilot users	User validation: ≥80% find onboarding clear in 10-min test
4. Architecture Setup	Week 5–6	Supabase project, Next.js skeleton, FastAPI skeleton, CI/CD pipeline, auth working, DB migrations running	Set up AWS, Supabase, Clerk auth, GitHub Actions pipeline, basic E2E test framework, staging environment	Auth → DB → API round trip working; deploy to staging in <5 min
5. MVP Development	Week 7–16	All MVP features built and tested (see PRD Section 3.1)	10-week build sprint: entity setup, deadline engine, WhatsApp reminders, CA portal, billing, audit log	All 10 MVP features passing acceptance criteria, 0 P0 bugs in staging
6. Alpha Testing	Week 17–18	Alpha feedback report, bug backlog, UX improvements list	5 pilot CA firms + 20 SMB owners use the product, collect structured feedback, prioritise fixes	NPS ≥40 from alpha users, <5 P1 bugs reported
7. Beta Testing	Week 19–22	Beta feedback synthesis, performance benchmarks, billing tested end-to-end	50 beta users (mix of SMB + CA), monitor error rates, test WhatsApp delivery, load test deadline engine	99.5% reminder delivery rate, p95 API response <800ms, 0 data loss incidents
8. Production Launch	Week 23–24	Production deployment, monitoring dashboards, runbook, launch announcement	Flip to production, execute GTM plan (Product Hunt, CA outreach, LinkedIn), monitor error rates	100 paying users in first 30 days, <0.1% error rate, uptime >99.9%
9. Scaling Phase	Month 7–12	Performance optimisations, multi-tenant hardening, V2 features begin	Address bottlenecks from production load, add V2 features (regulatory agent, filing readiness score), CA white-label	500 paying entities, MRR █10L, p95 API <400ms
10. Optimisation	Month 12+	AI cost reduction, retention improvements, expansion features	Optimise LLM costs (fine-tune smaller models), implement semantic caching, launch referral program	AI cost <█5/entity/month, NRR >110%, churn <3% monthly

SECTION 9 — AGILE & PROJECT MANAGEMENT

9.1 Sprint Structure

Element	Detail
Element	Detail
Sprint Length	2 weeks — long enough to ship meaningful features, short enough to catch drift
Sprint Planning	Monday AM: review backlog, assign to sprint, confirm acceptance criteria — max 2 hours
Daily Standup	Async — Loom video or Linear comment: what I did, what I'm doing, any blockers
Sprint Review	Friday PM: demo to pilot user or CA — even if internal, treat as external demo
Retrospective	30 min: 3 things to keep, 2 things to drop, 1 experiment next sprint
Backlog Grooming	Wednesday mid-sprint: 45 min reviewing and estimating next sprint items
Story Points	Fibonacci (1, 2, 3, 5, 8, 13) — 13 = needs breaking down. Solo founder: use T-shirt (S/M/L/XL)
Sprint Velocity Target	Solo founder: 20–30 points per 2-week sprint. Hire first engineer at 25+ consistent sprints.

9.2 Epic Breakdown

Epic	User Stories Count	Sprint Estimate	Priority
Entity & Workspace Setup	8 stories	Sprint 1	P0
Compliance Obligation Engine	10 stories	Sprint 2–3	P0
Deadline Calendar & Dashboard	7 stories	Sprint 3–4	P0
WhatsApp + Email Notification System	6 stories	Sprint 4–5	P0
Document Management	5 stories	Sprint 5	P1
CA Advisor Portal	8 stories	Sprint 6–7	P0
Billing & Subscription	5 stories	Sprint 7	P0
AI Obligation Mapper	6 stories	Sprint 8	P1
Audit Log & Admin Panel	4 stories	Sprint 9	P1
Analytics Dashboard	5 stories	Sprint 10	P2

9.3 Git Branching Strategy

BRANCH STRUCTURE:

main → Production. Only merge via PR. Protected branch. Requires 1 review.
develop → Staging environment. Feature branches merge here first.

feature/* → Individual feature work: feature/deadline-engine, feature/whatsapp-integration
fix/* → Bug fixes: fix/reminder-duplicate-send
hotfix/* → Production hotfixes: hotfix/gst-deadline-date-wrong
release/* → Release preparation: release/v1.2.0

COMMIT CONVENTION (Conventional Commits):

feat(notifications): add WhatsApp reminder 3-day trigger
fix(deadlines): correct GSTR-3B due date calculation for composition dealers
chore(deps): update reportlab to 4.1.0
test(obligations): add unit tests for state PT obligation mapping
docs(api): update /entities endpoint documentation

PR REQUIREMENTS:

- At least 1 passing CI run (tests + lint)
- Linear ticket linked in PR description
- Acceptance criteria checked off
- Staging deployment verified for UI changes

SECTION 10 — MONETIZATION & BUSINESS MODEL

10.1 Pricing Architecture

Tier	Price	Entity Limit	Users	Key Features	Target
Starter	Free	1 entity	1 user	Calendar, reminders (email only), 5 docs	Trial + acquisition hook
Growth	■1,999/mo \$29/mo	3 entities	3 users	All Starter + WhatsApp reminders, CA portal, document vault, AI summaries	Core paying SMB
Business	■4,999/mo \$69/mo	10 entities	10 users	All Growth + white-label CA portal, analytics, bulk import, API access (read)	Agencies, multi-entity operators
Enterprise	■14,999/mo \$199/mo	Unlimited	Unlimited	All Business + custom workflows, dedicated onboarding, SLA, API (write), compliance audit PDF	Large CAs, holding companies

10.2 Unit Economics Model

Metric	Conservative	Optimistic
Metric	Conservative	Optimistic
ARPU (average across tiers)	■2,500/mo	■3,800/mo
Gross Margin (SaaS)	78%	83%
CAC (CA referral channel)	■3,000	■1,500
CAC (paid digital)	■8,000	■5,000
Blended CAC	■4,500	■2,800
Churn (monthly)	4%	2%
Average LTV ($1/\text{churn} \times \text{ARPU}$)	■62,500	■1,90,000
LTV:CAC ratio	13.8x	67.9x
Payback period	1.8 months	0.7 months

10.3 MRR Projections

Month	Paying Customers	ARPU	MRR	Cumulative Revenue
Month 1	20	■2,000	■40,000	■40,000
Month 3	60	■2,200	■1,32,000	■3,00,000
Month 6	180	■2,400	■4,32,000	■14,00,000
Month 9	380	■2,600	■9,88,000	■42,00,000
Month 12	600	■2,800	■16,80,000	■90,00,000

Month 18	1,400	■3,200	■44,80,000	■3.2 Cr
Month 24	3,000	■3,500	■1.05 Cr / mo	■8.5 Cr

Note: Conservative model. Based on CA partnership channel reaching 5 CA firms by Month 3, each bringing 20–40 SMB clients.

10.4 Infrastructure Cost at Scale

Component	At 500 entities	At 5,000 entities
Component	At 500 entities	At 5,000 entities
AWS ECS Fargate (2 tasks)	\$80/mo	\$320/mo (4 tasks)
Supabase (Pro)	\$25/mo	\$200/mo (custom plan)
Upstash Redis	\$10/mo	\$60/mo
AWS SES (email)	\$5/mo	\$45/mo
WhatsApp (Gupshup)	■8,000/mo	■75,000/mo
AI API costs (Claude Haiku)	\$30/mo	\$200/mo
Total infra cost	~■12,000/mo	~■90,000/mo
Infra as % of MRR	~2.7% of ■4.4L MRR	~0.8% of ■1.1Cr MRR

SECTION 11 — GO-TO-MARKET STRATEGY

11.1 Primary Acquisition Channels (Ranked)

Channel	Strategy & Execution
Channel	Strategy & Execution
CA Firm Partnerships (#1)	Partner with 10 CA firms before launch. Offer free Business plan for CA portal + their first 20 clients free for 3 months. Each CA is a distribution channel to 50–500 SMBs. Target: ICAI local chapters, CA communities on LinkedIn and WhatsApp.
SEO + Content (#2)	Publish deadline-specific landing pages: "GSTR-3B due date 2026", "TDS deposit deadline July 2026", "ROC annual filing due date". These rank for transactional queries from SMB owners who just got a notice or missed a deadline. Low-cost, high-intent traffic.
LinkedIn Organic (#3)	Post weekly: "Compliance deadlines this week for Indian SMBs" — tagged, shared, bookmarked. Build audience of 10K+ before launch. Position founder as compliance-aware authority.
Reddit + IndieHackers (#4)	Post in r/IndiaBusiness, r/IndianStartups, r/smallbusiness with genuine value: "I mapped all GST deadlines for FY27 — here's the full calendar." Drive to landing page. Not spam — genuine utility posts.
Product Hunt Launch (#5)	Launch on a Tuesday. Prepare hunter relationships. Demo video showing 60-second setup to compliance calendar. Target: #1 Product of the Day in SaaS/Productivity.
WhatsApp Community Outreach (#6)	Indian SMB owners trust WhatsApp groups. Partner with business associations, startup communities, and local trade groups to share the tool. Offer group discount codes.

11.2 First 100 Users Plan

	Action	Target
	Cold outreach to 50 CAs via LinkedIn + email. Message: "I built a compliance calendar for your clients — free for your firm + 20 clients"	5 CA pilot commitments
	Each CA pilot brings their 10–20 most compliance-stressed clients as beta users	80–100 SMB users activated
	Personal follow-up call with every user. Collect NPS, fix top 3 issues.	NPS ≥40, Product Hunt prep
	Launch on Product Hunt + LinkedIn announcement. SEO pages go live.	200+ new signups, 50 convert to paid
	Launch CA referral program: CAs earn ₹500/month per paying client they refer	Organic CA referral loop starts

11.3 SEO Strategy

	Target Keywords	Intent
--	-----------------	--------

	GSTR-1 due date, GSTR-3B due date 2026, GST filing calendar	Transactional — user about to miss deadline
	TDS deposit due date, TDS return filing deadline chart	Informational + transactional
	ROC annual return filing date, DIR-3 KYC deadline	Informational — company secretary search
	Late GST filing penalty calculator, missed TDS deposit interest	High-intent — user just got a notice
	GST late fee calculator, advance tax calculator	Tool pages — high engagement, backlink magnet
	Best compliance software for CA firms, client deadline tracker for CAs	B2B acquisition via CA search

SECTION 12 — SCALING STRATEGY

12.1 Infrastructure Scaling Thresholds

Stage	Entities	Architecture Change
Stage	Entities	Architecture Change
0 → 500	<500	Single ECS task, Supabase Pro, Upstash free/starter — no changes needed
500 → 2,000	500–2k	Add read replica to Supabase, scale ECS to 2 tasks, add CloudFront caching for static assets, Redis connection pooling
2,000 → 10,000	2k–10k	Migrate to RDS Postgres (more control), ECS auto-scaling (2–8 tasks), separate notification service as independent ECS task, pgvector on dedicated instance
10,000 → 50,000	10k–50k	Consider Kubernetes (EKS), DB sharding by workspace, multi-region (Mumbai + Singapore), dedicated AI inference layer, CDN for document delivery
50,000+	50k+	Full microservices extraction, event-driven architecture (Kafka), global edge, dedicated ML infrastructure for predictive models

12.2 AI Cost Optimisation Strategy

Optimisation	Implementation
Optimisation	Implementation
Semantic caching	Cache AI responses for identical obligation+jurisdiction combinations — >60% of obligation mapping queries are repeated entity types. Use Redis with embedding-based similarity cache.
Model tier routing	Obligation mapping and summaries → Claude Haiku (\$0.25/M tokens). Complex regulatory analysis → Claude Sonnet only when needed. Batch weekly digests → Haiku. Never use Opus for automation.
Batch processing	Regulatory watcher runs 2am — batch process 100 documents per LLM call rather than individual calls. 10x cost reduction.
RAG before LLM	Always retrieve relevant compliance rules from pgvector before calling LLM. 70% of queries can be answered from retrieval alone with confidence scoring — no LLM needed.
Fine-tuning (Month 12+)	Fine-tune a small model (Phi-3-mini or Llama 3.1-8B) on Indian compliance Q&A; dataset. Target: replace 80% of Haiku calls with self-hosted inference at ■2/entity/month vs ■5/entity/month.

SECTION 13 — RISK ANALYSIS

13.1 Full Risk Register

Risk	Category	Probability	Impact	Mitigation
AI maps wrong obligations for entity type	Technical / AI	Medium	Critical	HITL review for low-confidence mappings; manual override by CA; extensive test suite for obligation mapping by entity+state combination
WhatsApp delivery failures before deadline	Operational	Medium	High	SMS fallback for all WhatsApp reminders; email as secondary; in-app notification as tertiary; delivery confirmation tracking with retry queue
Regulatory rule changes not detected quickly	AI / Ops	Medium	High	Multiple RSS sources; daily cron at 2am; CBIC email subscription backup; CA network as human early warning system
CA doesn't onboard their clients to the tool	Business	High	High	Offer CA a co-branded version (white-label) so it's "their tool" — removes adoption friction; CA becomes internal champion
Tally / Zoho adds a compliance calendar feature	Competition	Medium	Medium	Speed of execution + CA distribution moat + compliance knowledge graph depth — a feature inside an accounting tool will always be less focused than a dedicated compliance OS
GST portal API access revoked or changed	Technical	Low	High	Scraping as fallback; user can manually confirm filing; no hard dependency on GST portal API in MVP
Data breach of SMB financial/compliance data	Security	Low	Critical	Supabase RLS, encrypted PII fields, annual pentest, SOC 2 preparation from Month 6, bug bounty program
AI hallucination in compliance summary causes incorrect action	AI	Medium	Critical	All AI summaries include "verify with your CA" disclaimer; confidence score shown; no automated filing (human always clicks "mark filed")
Solo founder burnout / execution gap	Operational	Medium	High	Hire first engineer by Month 4 if MRR > ₹3L; use Emergent AI and Cursor aggressively to multiply solo output; strict sprint scope limits
Indian SMB unwilling to pay for SaaS	Business	Low	Critical	Already validated: compliance spend is non-discretionary; pricing at ₹1,999 is less than one missed GST late fee (₹2,000–5,000)

SECTION 14 — EXECUTION PRIORITY MATRIX

14.1 Feature Impact vs Engineering Complexity

Feature	Impact	Complexity	Priority Score	Build When
Entity setup wizard	10	3	33	Week 1 — foundation for everything
Compliance deadline engine	10	4	25	Week 2 — core value prop
WhatsApp reminders	9	4	22.5	Week 4 — daily active use driver
CA advisor portal	9	5	18	Week 6 — primary distribution channel
Billing / Razorpay	8	3	26.7	Week 7 — monetisation unlock
AI obligation mapper	8	6	13.3	Week 8 — reduces onboarding friction
Document vault	7	5	14	Week 5 — retention driver
Filing readiness score	7	4	17.5	Month 3 — V2 upsell signal
Regulatory watcher agent	8	7	11.4	Month 3 — defensibility moat
Analytics dashboard	6	5	12	Month 4 — expansion feature
White-label CA portal	7	6	11.7	Month 5 — enterprise upsell
Fine-tuning / self-hosted AI	5	8	6.25	Month 12+ — cost optimisation
Mobile app (native)	6	8	7.5	Month 9+ — after web PMF

Priority Score = Impact / Complexity × 10. Higher = build sooner.

SECTION 15 — COMPLETE IMPLEMENTATION ROADMAP

15.1 Day-by-Day Execution (First 30 Days)

Day	Focus	Output
1–2	Customer discovery: Schedule 10 CA interviews via LinkedIn. Set up recording (Loom).	10 meeting confirmations, interview script ready
3–7	Run 5 CA interviews. Validate obligation complexity and willingness to pay. Analyse notes.	Insight report: top 3 pains confirmed
8–10	Run 5 more interviews (SMB owners). Validate landing page messaging hypothesis.	Messaging validated or pivoted
11–12	Set up development environment: Supabase, Next.js, FastAPI, Clerk, GitHub Actions.	Local dev → staging pipeline working
13–14	Design entity data model. Write DB migrations. Set up Supabase RLS policies.	entities, workspaces, users tables live
15–17	Build entity setup wizard (frontend). Wire to API. Test with 3 entity types.	Entity creation working end-to-end
18–21	Build obligation type seeding. Build deadline generation engine. Unit tests.	Deadline engine: 6 obligation types generating correct due dates
22–24	Build calendar view (frontend). Show deadlines with color coding.	Calendar renders correctly for demo entity
25–27	Set up AWS SES. Build email reminder service. Celery + Redis for scheduling.	Email reminders sending at correct intervals in staging
28–30	First pilot demo with 2 CA firms. Collect feedback. Fix top 5 issues.	2 pilot CAs agree to bring 10 clients each

15.2 Week-by-Week Roadmap (Month 2–6)

Week	Sprint Goal	Must Ship
5–6	WhatsApp integration + notification preferences	WA reminders working; user can set 7/3/1 day preferences
7–8	Document vault (upload, S3, basic AI tagging)	Documents uploadable and linked to deadlines
9–10	CA advisor portal (client portfolio view, nudge system)	CA can log in, see all client deadlines, send nudge
11–12	Billing: Razorpay + Stripe integration, plan management	User can subscribe, upgrade, download invoice
13–14	AI obligation mapper (Haiku + RAG) — reduce manual setup	New entity: obligations auto-suggested in <30s
15–16	Audit log, admin panel, compliance score widget	Every action logged; dashboard shows compliance score

17–18	Alpha: 5 CA firms, 20 SMBs. Bug fixing sprint.	NPS ≥ 40 ; < 5 P1 bugs
19–20	Filing readiness score, document checklist improvements	Readiness score shown on deadline detail
21–22	Analytics dashboard v1 (on-time rate, compliance trends)	3 charts working; PDF export button
23–24	Beta: 50 users. Performance testing. Production prep.	p95 API < 800 ms; reminder delivery $> 99\%$

15.3 Month-by-Month Roadmap (Month 7–24)

Month	Strategic Goal	Product Focus	Revenue Target
7	Post-launch growth	Regulatory watcher agent, fix retention drop-off from onboarding	■3L MRR
8	CA white-label launch	White-label portal for CA firms, CA referral program live	■5L MRR
9	Mobile + reach	PWA mobile app, Hindi language support, Tier 2 city expansion	■7L MRR
10	Enterprise pilot	Enterprise tier features, SLA, dedicated onboarding for 3 large CA firms	■9L MRR
11	AI maturity	Fine-tuning evaluation, semantic caching, LLM cost 40% reduction	■12L MRR
12	Seed fundraising	Prepare deck, YC application, angel round if needed for scale	■16L MRR
15	Series A prep	1,000+ paying entities, NRR $> 115\%$, international pilot (UAE VAT)	■30L MRR
18	International launch	UAE VAT module live, Singapore GST, global pricing	■45L MRR
24	Platform / API	Compliance API for fintechs, credit scoring partnership, Series A closed	■1Cr+ MRR

SECTION 16 — EMERGENT AI DEVELOPMENT STRATEGY

16.1 Where AI-Generated Code is Safe to Use Directly

Safe Zone	Why + How to Use
Safe Zone	Why + How to Use
UI components (React/Next.js)	Forms, tables, modals, layout components — generate with Cursor or v0.dev. Review for accessibility and state logic, but structure is safe.
API route boilerplate	CRUD endpoints for entities, deadlines, documents — generate the scaffold, review the business logic layer, always add your own validation.
Database migrations	Generate Alembic/Prisma migration files from schema descriptions. Always review before running against production.
Email and WhatsApp message templates	Generate reminder message variants, subject lines, content. Human reviews tone and accuracy.
Test scaffolding	pytest unit test scaffolding for pure functions — obligation date calculators, validation logic. Review and add edge cases manually.
Documentation and docstrings	Generate API docstrings, README sections, endpoint documentation. Accurate for code-adjacent tasks.
Repetitive data transformations	Pandas/SQL transformations for reporting, CSV exports — generate and test, don't reason from scratch.

16.2 Where Manual Engineering is Required

The following areas require human engineering judgment. AI can assist but should not own these decisions:

Manual Engineering Zone	Why AI Should Not Own This
Manual Engineering Zone	Why AI Should Not Own This
Obligation mapping logic (the compliance rules)	Errors here cause real-world financial harm. Every rule must be verified against primary sources (CBIC, MoF). AI suggests, human confirms.
Multi-tenant data isolation (RLS policies)	Security boundary code — a bug leaks one customer's data to another. Write this yourself, test it explicitly, have it reviewed.
Deadline generation algorithm	Edge cases: leap years, GST council postponements, state holiday overrides. Test 50+ real scenarios manually before shipping.
Billing and subscription state machines	Money-adjacent code — failed payments, pro-rating, downgrade logic. Every state transition must be explicitly designed and tested.
AI confidence scoring thresholds	Deciding when "confidence < X → require human review" is a product judgment call that affects user trust. Not automatable.
Production deployment architecture	IAM policies, VPC rules, secrets management — manually designed, never auto-generated from a prompt.

16.3 Effective Prompting Strategy for DeadlineOS Development

Task Type	Prompt Pattern
Task Type	Prompt Pattern
Generate API endpoint	Context: FastAPI, PostgreSQL via Supabase, Pydantic models. Task: Create a POST /entities endpoint that [exact spec]. Include: input validation, error handling, audit log entry, return schema. Do not: call DB directly — use repository pattern.
Debug a failing test	Here is the test: [paste]. Here is the function: [paste]. Here is the error: [paste]. Identify the exact line causing the failure and explain why. Do not rewrite the whole function.
Refactor for performance	This function runs in a nightly job processing 5,000 deadline records. Current runtime: 45s. Identify the bottleneck and suggest one targeted optimisation. Do not rewrite — suggest the change.
Write a compliance prompt	You are generating a WhatsApp reminder for an Indian SMB owner. Entity: {name}. Filing: {filing_type}. Due date: {date}. Tone: polite but urgent. Max 160 chars. Include a link placeholder: {link}. No markdown, no emojis.
Architecture decision	I need to decide between [Option A] and [Option B] for [specific problem in context]. My constraints are: solo founder, India-first, <\$50/month infra budget at 500 customers, must be operable without DevOps expertise. Recommend one option and explain the trade-offs.

Executive Summary

- DeadlineOS addresses a mandatory, recurring, penalised pain point for 63M+ Indian MSMEs — the strongest possible foundation for a SaaS business.
- The CA distribution channel is the single highest-leverage growth mechanism. Prioritise CA partnerships above all other acquisition.
- The compliance knowledge graph and filing history are the long-term moat. These compound with time and cannot be easily replicated.
- Technology choices are conservative and operationally lean — appropriate for a solo founder who must move fast without DevOps overhead.
- AI is used where it creates genuine leverage (obligation mapping, regulatory watching, personalised reminders) — not as a gimmick.
- The path to █1Cr MRR is achievable in 18–24 months with CA partnerships + SEO. The path to Series A requires demonstrating NRR > 115% and a functional regulatory update engine.
- The single most important milestone in the first 90 days: 3 CA firms actively using the product with their clients. Everything else flows from this.

This document was generated as an investor-grade execution blueprint for compliance calendar & filing orchestration SaaS — identified as the #1 solo-founder opportunity in the 2025–26 Indian AI SaaS market based on analysis of 6,700+ Reddit pain-point posts, CA community discussions, GSTN ecosystem reports, and YC company data.
